

Speaker Profile

Peter Tan

BA, MBA, MIACT
Educational Therapist, PEMF Specialist
Brain, Body Health Researcher
Director, Apcot Educational Centre

Since 2005, Peter Tan, a registered professional member of International Association of Counsellors and Therapists(IACT) had been actively involved in working with children with learning disabilities such as Autism, ADHD and learning Difficulties. On seeing the increase cases of children and adults with learning disabilities and memory loss, Apcot Educational Centre was established in 2007. Technologies such as Neurofeedback were later introduced in 2008 to enhance brain-based training methodologies at the centre.

After spending years in continued research into developing better protocols for brain-based training, Brainomics was conceptualised and developed in 2014. However in 2015, after being diagnosed with Stage 4 Lymphoma and given a prognosis that his survival from Cancer was dismal with established treatments, he turned to Pulsed Electromagnetic Field (PEMF) as an alternative therapy. Within a short few months, he was declared in remission from cancer by his Oncologist.

After further research and recognising the powerful enhancing effects of PEMF on the brain and body, Apcot Wellness was established in 2016 to make PEMF therapies available and affordable to the home. With increasing number of testimonies of healing and improvement in brain and body with PEMF, Brainomics was subsequently restructured to make the brain-based program available to homes with parents and caregiver training included.

Seminar Topics

Seminar 1: Brainomics, Channelling Critical Resources to Heal the Brain.

Seminar 2: Pulse Electromagnetic Field (PEMF) Therapy, The Future of Health
